

Beware!

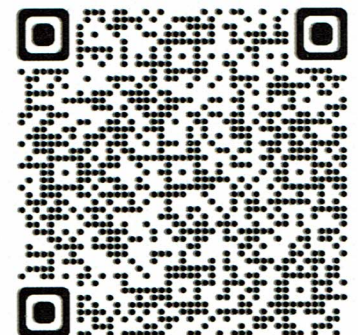

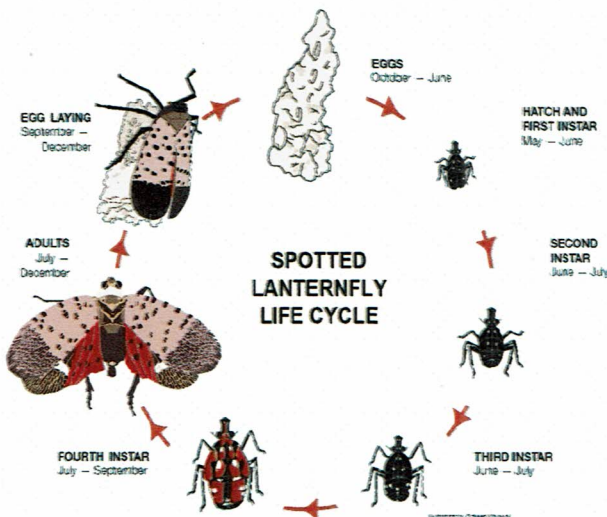

An invasive insect called **Spotted Lantern Fly** can damage your trees

If you see wingless crawling bugs on your tree like those in the insert on the left, wrap the tree trunk with sticky insect trap tape!

The tape traps the crawling insects and some winged adults to reduce the population!

For more information on this invader and how to help control it visit: <https://www.udel.edu/academics/colleges/canr/cooperative-extension/trending/spotted-lanternfly/> or scan this code:
